This is the body of latex hola hell yeah

"I need to generate documents lrom a web application and would like to do this using thelanguage and Laž2018lž2019eX. are there any tools that will help me?Application will be hosted on Linux. we can run any external commands using popen.is currently no delined input document iorrnat, nor any storage lormat, but outputthe end user should be PDF.2documents will have complex taoles, graphs. and require typeset equations , hencereason to use LaTex. We would also prefer not to use intermediate files sueh as xmlr¿hlmlˇ00bb¿ pdli would like something like pyTeX or plasTeX that could render directly to PDF."
